Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/502,490

Applicant(s)

CHOI ET AL.

Examiner

TUYEN T. NGUYEN

Art Unit

2832

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
 Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-14 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 7-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Takanabe [JP 06-069032].

Takanabe discloses a magnetic element [figures 1-2] comprising:

- a composite magnetic thin film including:

- a first layer which is mainly composed of Fe or FeCo, with the saturation magnetization of 16 kG (1.6 T) or more by itself, and the first layer is constituted with a columnar structure of 1.4 or less aspect ratio or an amorphous structure, wherein the first layer comprising a T-L composition (here, T is Fe or FeCo, L is one or more of C, B, and N), and

a second layer which is mainly composed of Co-based amorphous alloy arranged on either of the surfaces of the first layer, having the properties by itself that the permeability is 1,000 or more (the measurement frequency: 10MHz), the saturation magnetization is 10 kG (1.0 T) or more, and the resistivity is 100 $\mu\Omega\text{cm}$ or more, wherein the first layer and the second layer are alternately laminated to form a multilayer film structure.

Art Unit: 2832

Regarding claims 3-5, Takanabe discloses the real part (μ') of the complex permeability at 1 GHz is 400 or more, the quality factor Q (μ'/μ'') is 4 or more, and the saturation magnetization is 14 kG (1.4 T) or more, wherein when T_1 denotes the thickness of said first layer and T_2 denotes the thickness of said second layer, T_1 falls within the range from 3 to 70 nm and T_1/T_2 falls within the range from 0.15 to 3.50.

Regarding claim 7, Takanabe discloses the second layer is mainly composed of Co, and comprises at least one additional element selected from the group consisting of B, C, Si, Ti, V, Cr, Mn, Fe, Ni, Y, Zr, Nb, Mo, Hf, Ta and W.

Regarding claim 8, Takanabe discloses the second layer is selected from the group consisting of CoZr, CoHf, CoNb, CoMo, CoZr_n, CoZrTa, CoFeZr, CoFe_n, CoLiNb, CoZrMo, CoFeB, CoZr_nMo, CoZrMoNi, CoFeZrB, CoFeSiB and CoZr_nCrMo.

Regarding claim 9, Takanabe discloses the concentration of the element L contained in the first layer falls within the range from 2 to 20 at%.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takanabe in view of Takada et al. [JP 02-143510].

Takanabe discloses the instant claimed invention except for the thickness ratio

Art Unit: 2832

Takada et al. discloses when T1 denotes the thickness of said first layer and T2 denotes the thickness of said second layer, the thickness of said first layer T1 falls within the range from 0.5 to 3.0 nm and T1/T2 falls within the range from 0.8 to 3.0.

It would have been obvious to one having ordinary skilled in the art at the time the invention was made to use the thickness ratio of Takada et al. in Takanabe for the purpose of improving saturation magnetic flux density.

Claims 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saito [JP 07-029732] in view of Takanabe [JP 06-069032].

Saito discloses a magnetic thin film for used in a monolithic microwave integrated circuit comprising:

- a plurality of magnetic thin film [6a, 6b];
- an insulating film [5] sandwiched between the magnetic layers; and
- a conductor coil [4] embedded in the insulating film.

Saito discloses the instant claimed invention except for the specific of the magnetic thin films.

Takanabe discloses composite magnetic thin film including:

- a first layer which is mainly composed of Fe or FeCo, with the saturation magnetization of 16 kG (1.6 T) or more by itself, and the first layer is constituted with a columnar structure of 1.4 or less aspect ratio or an amorphous structure, wherein the first layer comprising a T-L composition (here, T is Fe or FeCo, L is one or more of C, B, and N), and

a second layer which is mainly composed of Co-based amorphous alloy arranged on either of the surfaces of the first layer, having the properties by itself that the permeability is

Art Unit: 2832

1,000 or more (the measurement frequency: 10MHz), the saturation magnetization is 10 kG (1.0 T) or more, and the resistivity is 100 $\mu\Omega\text{cm}$ or more, wherein the first layer and the second layer are alternately laminated to form a multilayer film structure.

It would have been obvious to one having ordinary skilled in the art at the time the invention was made to use the magnetic thin film of Takanabe in the device of Saito for the purpose of improving saturation magnetic flux density and permeability.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TUYEN T. NGUYEN whose telephone number is 571-272-1996. The examiner can normally be reached on M-F 8:30-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, ELVIN ENAD can be reached on 571-272-1990. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
